#### **DETAILED ACTION**

## Status of Application, Amendments, and/or Claims

1. Claims 1-5, 8 and 10 are currently pending and under examination. All arguments have been fully considered and thoroughly reviewed, but are deemed not persuasive for the reasons that follow. Any objections and rejections not reiterated below are hereby withdrawn.

# Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 8 and 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cleuziat et al. (USPN 5,824,517) in view of Kacian et al. (USPN 5,916777).

With regard to claim 1, Cleuziat et al. teach a method for amplifying a nucleic acid, the method comprising the steps of:

- (A) preparing a reaction mixture
- (b) a nucleic acid as a template a deoxyribonucleotide triphosphate, a DNA polymerase having a strand displacement activity, at least two chimeric oligonucleotide primers and an RNase H, wherein one of the chimeric oligonucleotide primers serves as a ladder-forming oligonucleotide primer (see col. 6 line 41 to col. 7 line 31, where, two chimeric primer, RNase H, a DNA polymerase having strand displacement activity is used. Additionally, one of the chimeric primers serves as a ladder-forming primer as this primer meets the requirements outlined in the instant specification in paragraphs 0054 and 0055. See also col. 11 lines 10 to col. 12 line 66).

Art Unit: 1637

wherein each chimeric oligonucleotide primer contains a ribonucleotide as well as at least one selected from the group consisting of a deoxyribonucleotide and a nucleotide analog (see the abstract and col. 6 lines 7-9)

wherein the chimeric oligonucleotide primers comprise at least a first chimeric oligonucleotide primer which is complementary to a nucleotide sequence of the nucleic acid as a template and a second chimeric oligonucleotide primer which is homologous to a nucleotide sequence of the nucleic acid as a template, (see col. 6 line 41 to col. 7 line 31 and also col. 11 lines 10 to col. 12 line 66)

wherein the ladder-forming oligonucleotide primer has a sequence complementary to a region of the nucleic acid as a template that is complementary to the first chimeric oligonucleotide primer and/or a nucleotide sequence 3' to said region and has on its 5' side, a sequence complementary to a nucleotide sequence on the 5' side of the second chimeric oligonucleotide primer which is homologous to the nucleic acid template; a nucleotide sequence of the nucleic acid as a template corresponding to a region 5' to the 5' terminus of the portion homologous to the second chimeric oligonculeotide primer; or both (see col. 6 lines 41- col. 7 line 31 and also col. 11 lines 10 to col. 12 line 66)

(B) incubating the reaction mixture for a sufficient time to generate a ladder-like amplification product under constant-temperature conditions under which specific annealing of the primer to the nucleic acids as a template, a reaction of synthesizing an extended strand and a strand displacement reaction by the DNA polymerase, as well as a reaction of cleaving an extended strand by RNase H take place (see col. 6 lines 41- col. 7 line 31 and also col. 11 lines 10 to col. 12 line 66, where ladder-like products are generated necessarily because of the presence of the ladder-forming primer, as defined in the instant specification)

With regard to claim 2, Cleuziat et al. teach the nucleic acid template is RNA and the nucleic acid is treated beforehand with a dntp, a DNA polymerase having a reverse transcription activity and at least

Application/Control Number: 10/582,345

Art Unit: 1637

one ladder-forming oligonucleotide primer to convert the nucleic acid into a reverse transcription product (see col. 6, lines 1-40, where the template can be RNA or DNA).

With regard to claim 3, Cleuziat et al.teach wherein the reaction mixture in step (A) further contains a DNA polymerase having reverse transcription activity (see col. 6 lines 31-37)

With regard to claim 4, Cleuziat et al. teach the nucleic acid template is an mRNA (see col. 8 lines 47-56, where total nucleic acid isolation is discussed and total RNA necessarily includes mRNA)

With regard to claim 5, Cleuziat et al. teach a single DNA polymerase having reverse transcription activity and strand displacement activity (see col. 6 lines 31-37)

With regard to claim 8, Cleuziat et al. teach a method for amplifying a nucleic acid, the method comprising the steps of:

- (a) amplifying a target nucleic acid according to the method for amplifying a nucleic acid defined by claim 1 and (see citations for rejected claim 1, as they all apply here)
- (b) detecting the amplified target nucleic acid (see col. 8 line 45, where Cleuziat disclose detecting target nucleic acids).

Cleuziat et al. do not teach all of the limitations of the instant claims. Specifically, Cleuziat et al. do not teach the ribonucleotide is positioned at the 3' terminus or on the 3' terminal side of the primer [claims 1 and 10].

Kacian et al. teach positioning a ribonucleotide at the 3' terminus of a chimeric primer (see the abstract and col. 9 lines)

It would have been prima facie obvious to place the ribonucleotide at the 3' terminus of a chimeric primer as disclosed by Kacian et al. and use the primer in a DNA amplification method as disclosed by Cleuziat et al. because Kacian et al. teach DNA primers with ribonucleotides at the 3' terminus is used to prevent contamination during PCR and that it also provides a convenient cleavage site for separation of the primer form the oligonculeotide product. An ordinary practitioner would have been

Page 5

Art Unit: 1637

motivated to place the ribonucleotide at the 3' terminus of a chimeric primer as disclosed by Kacian et al. and use the primer in a DNA amplification method as disclosed by Cleuziat et al. in order to amplify DNA while reducing the risk of contamination during the amplification process and facilitate separation of the primer from the resulting product.

## Response to Arguments

3. Applicants' arguments filed December 4, 2009, have been fully considered but they are not persuasive.

Applicants appear to argue the structure of the "ladder-forming oligonucleotide primer" has not been met by Cleuziat et al. This argument is not persuasive because there is no specific structure recited in the instant claims. As outlined in the rejection Cleuziat et al. meet the structural limitations for a "ladder-forming oligonucleotide" described in the instant specification at paragraph 0054 and 0055. Applicants argue Cleuziat et al. do not disclose the ladder-forming oligonculeotide primers and their characteristic sequences. This argument is not persuasive as there are no specific structures or sequences recited in the instant claims. The rejection is deemed proper and therefore maintained.

#### Summary

4. No claims were allowable.

#### Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control Number: 10/582,345 Page 6

Art Unit: 1637

the advisory action. In no event, however, will the statutory period for reply expire later than SIX

MONTHS from the mailing date of this final action.

## Correspondence

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Heather G. Calamita whose telephone number is 571.272.2876 and whose e-mail address is heather.calamita@uspto.gov. However, the office cannot guarantee security through the e-mail system nor should official papers be transmitted through this route. The examiner can normally be reached on Monday through Thursday, 7:00 AM to 5:30 PM.

If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Gary Benzion can be reached at 571.272.0782.

Papers related to this application may be faxed to Group 1637 via the PTO Fax Center using the fax number 571.273.8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to 571,272,0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public. For more information about the PAIR system, see http://pair-direct.uspto.gov.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

/Heather G. Calamita/ Primary Examiner, Art Unit 1637
